

alphaScreen by alphaSource **Patent Pending**

alphaScreen launch playbook

A practical guide for setting up roles, inviting candidates, reviewing screening results, and controlling next-step outreach.

LAUNCH STANDARD

"Each role has a clear link. Every candidate gets a consistent review. Scores are review aids — not hiring decisions."

Role-based screening

Every open role gets its own candidate link, so screening starts in one consistent place.

Consistent candidate review

Résumés, screening interviews, and scores stay together in one report for every candidate.

Entity-based access

Entities — offices, locations, branches, or teams — give every group the right scope of roles and candidates.

HOW A CANDIDATE MOVES THROUGH ALPHASCREEN

Role setup

>

Candidate link

>

Screening interview

>

Report review

>

Next-step approval

>

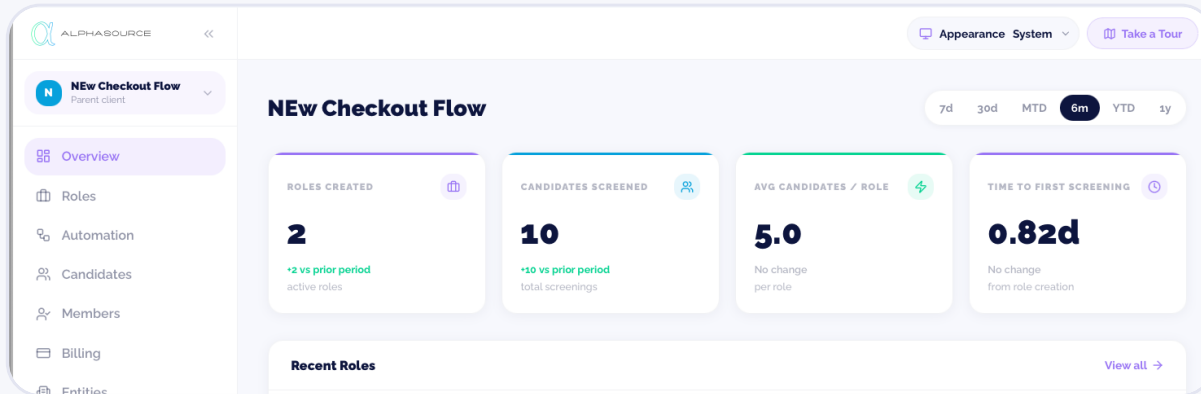

Scheduling link sent

alphaScreen supports role setup, screening, review, and approval. The hiring decision itself stays with your team.

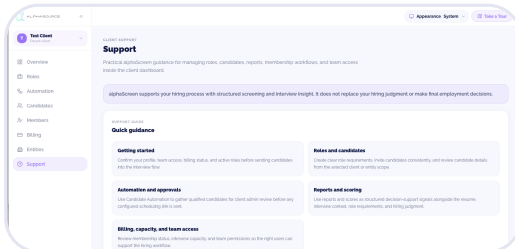

What alphaScreen helps your team do

SIX WORKFLOWS
ONE PLATFORM

alphaScreen gives your hiring team one place to set up roles, screen candidates, review results, and control what happens next.

- 1 Set up roles**
Create and manage open roles, each with its own candidate link.
- 2 Share candidate links**
One consistent link so every candidate enters screening the same way.
- 3 Review candidates and reports**
Screening results, scores, and evidence stay together in one place.
- 4 Use approval-controlled outreach**
Scheduling links go out only after your team approves a candidate.
- 5 Keep entity and member access organized**
Scope roles, candidates, and access by entity.

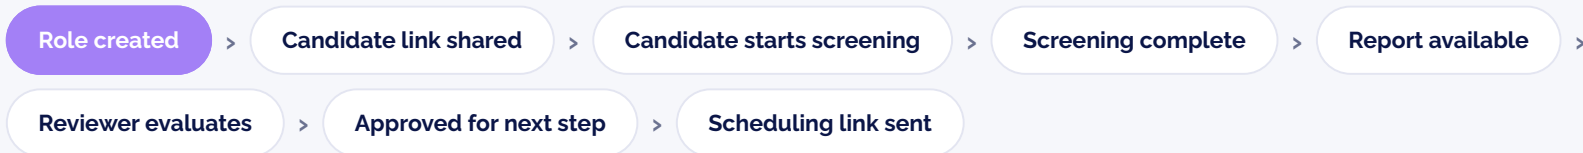

6 Get help when something needs correcting

If a report, an automation rule, or an entity import doesn't look right, the Support area has quick-start guidance — or your team can contact alphaSource directly.

Candidate lifecycle in alphaScreen

EIGHT STAGES
ONE STANDARD

Active work moves left to right. Approval is the gate that controls when a candidate hears back.

- Active work starts with the candidate link tied to a role — that link is what candidates use to enter the screening flow.
- Reports keep résumé, interview, and score information together for review.
- Screening results support review, not automatic decisions — the reviewer decides what happens next.
- Approval is required before a scheduling link is sent to a candidate. alphaScreen supports this workflow; it does not manage the rest of the hire.

WHERE WORK LIVES

Roles

Manage open roles and candidate links.

Candidates

Review screening results and candidate status.

Candidate report

Inspect details before deciding.

Review Candidates

Approve next-step outreach.

Launch checklist

Work through these before sharing candidate links with applicants.

ROLES & LINKS

- Each open role is created and set to the correct status
- Candidate links are copied from the role and tested
- Links for closed or filled roles are retired, not reused

ENTITIES & ACCESS

- Entities match your organization's structure
- Members are assigned to the correct entity
- CSV import was used for any bulk entity or member setup

AUTOMATION & SUPPORT

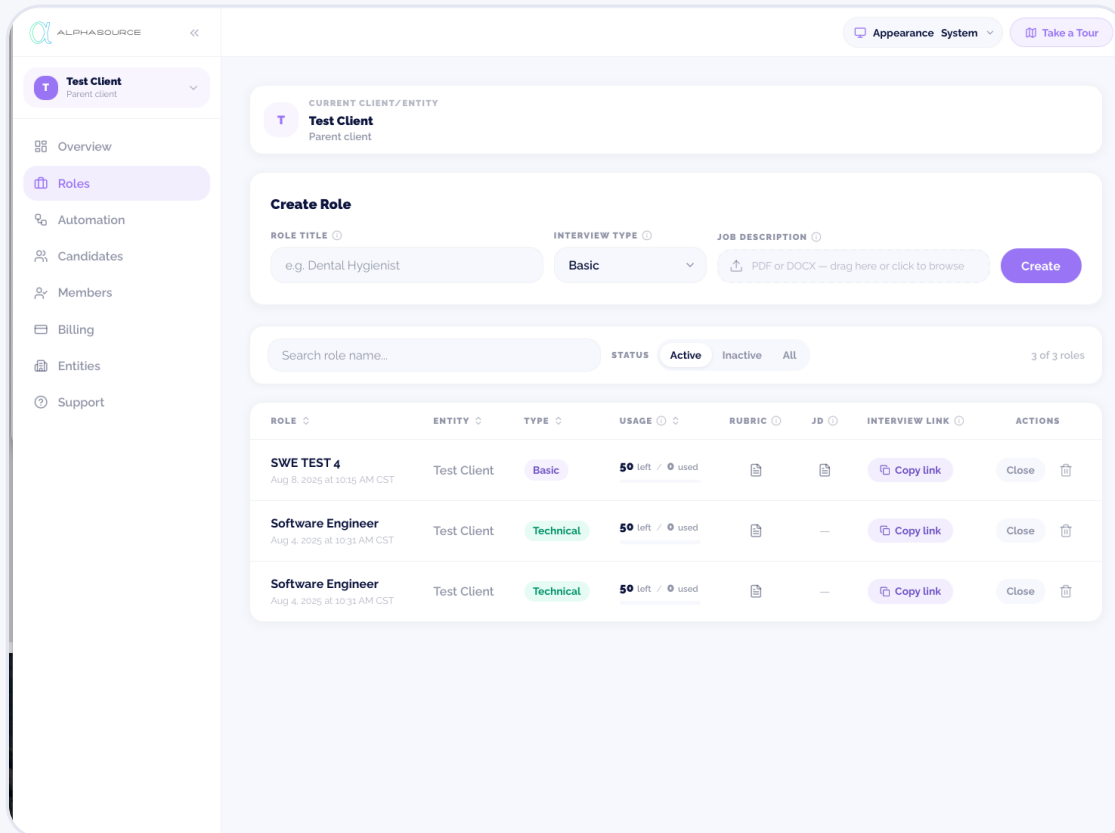

- Automation criteria and the scheduling link are reviewed
- The Review Candidates approval workflow is understood
- The team knows how and when to contact Support

BEFORE YOU LAUNCH

Confirm every item above before sharing candidate links with applicants. You can revisit this list any time your setup changes.

Roles and candidate links

ROLE FIRST
CANDIDATES SECOND

- 1 Role status**
Active, inactive, or closed.
- 2 Candidate link**
Every role has its own clear link.
- 3 Entity assignment**
Know which entity the role belongs to.
- 4 Role controls**
Edit, close, reopen, or copy the link where available.
- 5 Candidate volume**
Understand activity by role.

BEST PRACTICE

Create and manage candidate links from the role itself. Do not reuse an old link for a different, unrelated opening.

AVOID THIS

Do not leave a role active once it's no longer accepting candidates.

Candidates workspace

FILTER FIRST
REVIEW SECOND

CANDIDATE	ENTITY	ROLE	RESUME	INTERVIEW	OVERALL	CREATED
Jason Gardner	Test Client 919v5	Test New Rep Role Add	70%	18%	44%	May 4, 2026 5:42 PM CST
Jason Gardner	Test Client 919v5	QA Migration Role	76%	12%	44%	May 4, 2026 5:02 PM CST
Aaron Jacobs	Test Client 919v5	HR Assistant	65%	—	—	Apr 30, 2026 11:08 PM CST

Eric Michaels	Test Client 919v5	Count test role	85%	85%	85%	Mar 20, 2026 5:07 PM CST

5 of 5 candidates

- Entity selector**
Parent, all entities, or one specific entity.
- Role filter**
Narrow the list to one open role.
- Status**
Where each candidate stands in screening and review.
- Entity column**
See which entity each candidate belongs to.
- Score indicators**
Quick scan to help prioritize review.
- Created date**
See how recently a candidate applied.

BEST PRACTICE

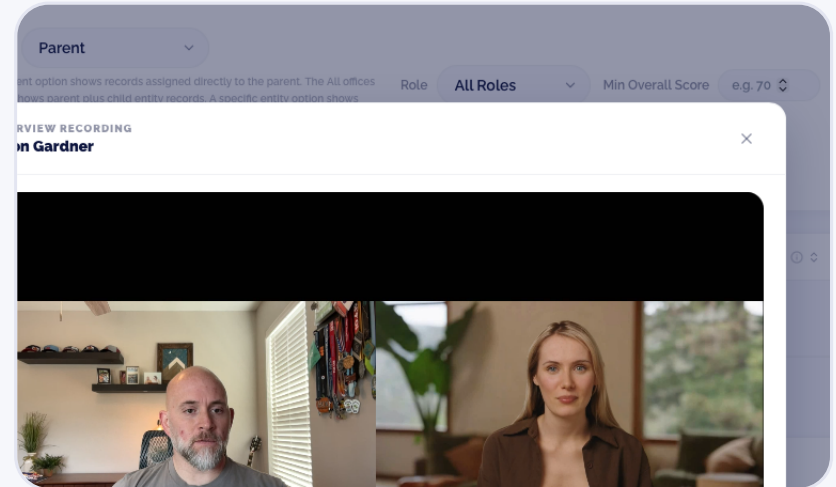

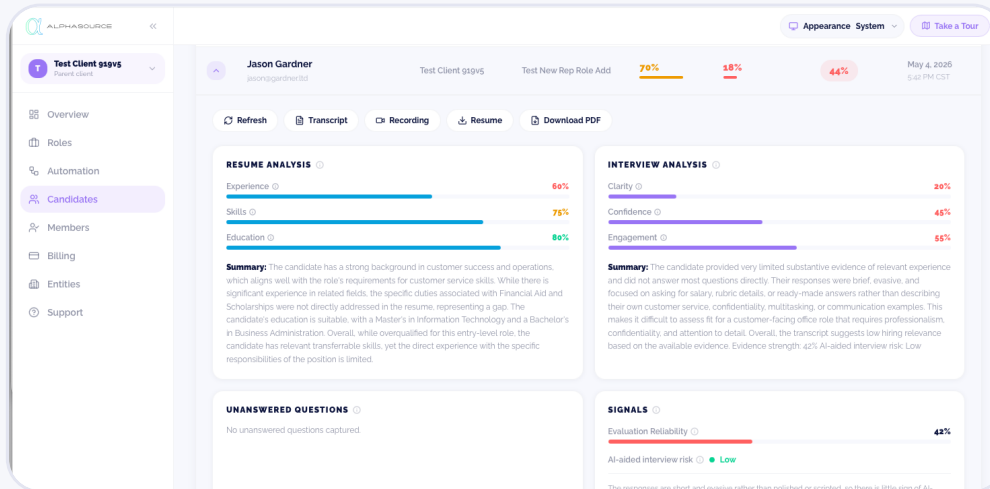

Use filters first. A focused candidate list is faster and less error-prone than scanning every candidate across every entity.

IMPORTANT DISTINCTION

The candidate list helps prioritize review. Your hiring team still makes the decision.

Candidate report: structured review

ONE RECORD
FULL PICTURE

- 1 Résumé & interview scores**
Two scores feed into one overall view.
- 2 Evidence and notes**
Transcript highlights and reviewer notes support the score.
- 3 Recorded screening interview**
Review the candidate's recorded responses in the report.
- 4 Recommended follow-up areas**
Surfaced for the reviewer, not decided automatically.

SCORE MEANING

SCORE	WHAT IT TELLS YOU
Résumé score	How closely the résumé appears to match the role.
Screening interview score	How strongly interview responses align with the role criteria.
Overall score	Combined review signal for prioritization.
Reliability / insufficient content	Flags when there wasn't enough information for a confident review.

IMPORTANT DISTINCTION

Scores are review aids. They are not hiring decisions.

Candidate experience

A quick look at what the candidate sees — useful context before you review their results.

HOW A CANDIDATE MOVES THROUGH SCREENING

1

Opens role-specific link

Candidate receives a link tied to one open role.

2

Completes basic information

Candidate enters basic information and résumé details.

3

Screening interview

Candidate may complete a video screening interview. A text-based accommodation path may be available.

4

Results return to dashboard

Responses and résumé information support the reviewer.

BEST PRACTICE

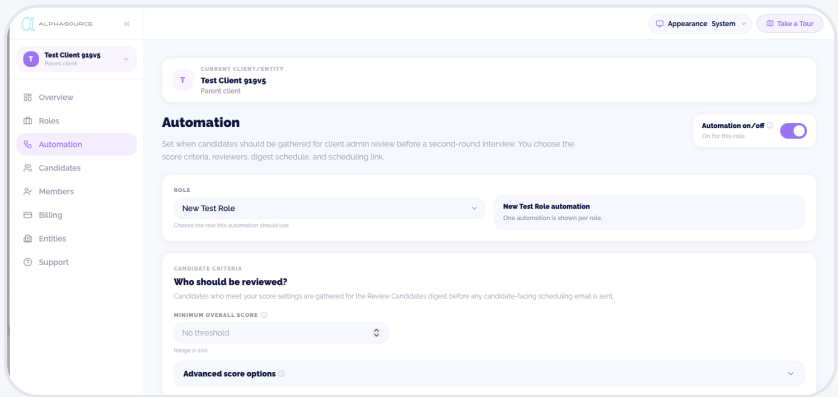

Tell candidates the screening interview is part of the first-pass review process and that the hiring team will follow up if they move forward.

AVOID THIS

Do not over-describe the technology behind the interview, and do not promise a hiring outcome at this stage.

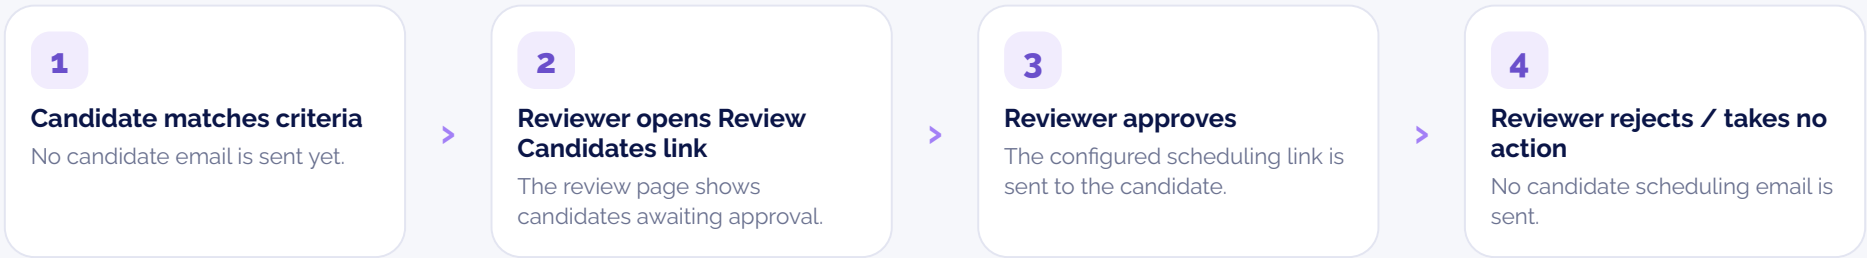

Review Candidates and controlled automation

APPROVAL CONTROLLED
NOT AUTONOMOUS

- 1 Matching criteria**
Which candidates match your configured criteria for review.
- 2 Review digest trigger**
Creates the Review Candidates list for the hiring team.
- 3 Scheduling link**
The next-step link sent only after a candidate is approved.

REVIEW CANDIDATES — HOW APPROVAL WORKS

IF...	THEN...
Candidate matches configured criteria	Appears in the review digest; no candidate email yet.
Reviewer approves the candidate	The scheduling link is sent.
Reviewer rejects / does not approve	No candidate scheduling email is sent.
Criteria or rules look wrong	Contact Support — alphaSource can help update, pause, or remove a rule.

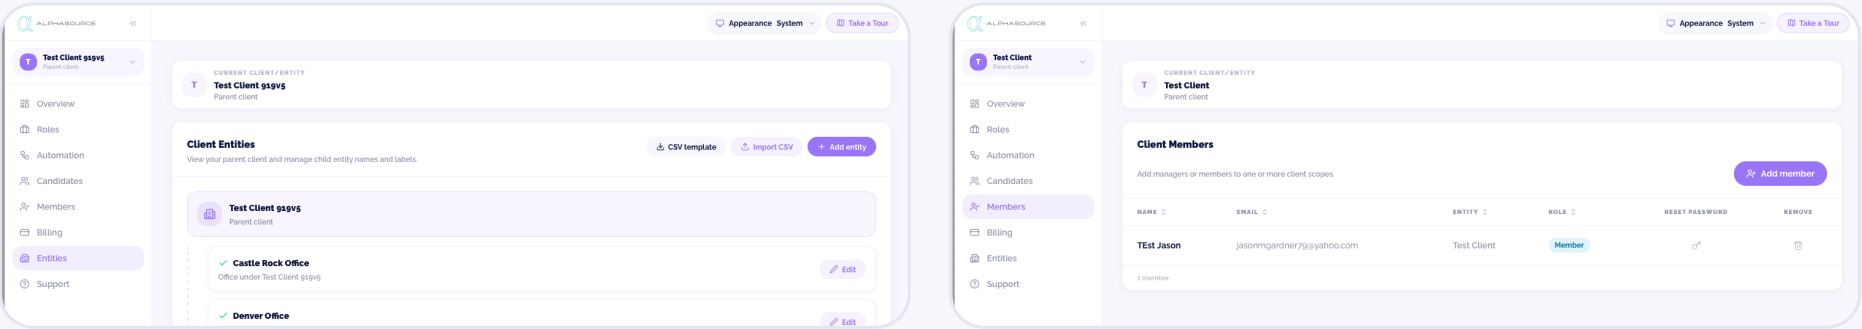

STANDING RULE

Automation supports review and approval. It does not send a candidate-facing scheduling email on its own, before approval.

Entities & member access

RIGHT SCOPE
RIGHT ACCESS

Roles, Candidates, and Members can each include an Entity selector — use it to control which records your team sees.

VIEW SELECTED

WHAT IT SHOWS

Parent / client name	Records assigned directly to the parent.
All entities (e.g., all offices, locations, branches)	Parent plus child entity records.
One specific entity	Records assigned directly to that entity. The Entity column shows which entity each row belongs to.

CREATING & ASSIGNING ENTITIES

- Client admins create child entities — offices, locations, branches, or teams — directly in alphaScreen.
- CSV import creates multiple child entities and their direct member assignments at once, using the provided template.
- Required columns: Name, Location type, Location user name, Location user email, Manager/Member designation.
- Imported members aren't emailed automatically. Temporary credentials, if generated, appear only in the import results — download and store them securely right away.
- Existing direct assignments are skipped on re-import, not duplicated.

ARCHIVING ENTITIES

- Archive a child entity once it's no longer active.
- Archiving hides it from active selectors and lists.
- Historical roles, candidates, members, reports, billing, and agreements are kept — archiving does not delete them.
- Archived an entity by mistake? Contact Support to restore it.

MEMBERS CAVEAT
Members filtering shows direct assignments for the selected entity only. Inherited or effective access is not the same as a direct assignment.

Operating quick reference

SITUATION	USE THIS ALPHASCREEN AREA	WHAT TO DO	CANDIDATE EMAIL?
Need to open a new position	Roles	Create or update the role and use its candidate link.	No
Candidate completes screening	Candidates	Open the candidate report and review.	No
Candidate matches criteria / looks ready	Candidate report / Review Candidates	Approve the next step when ready.	Yes, if approved
Candidate should not move forward	Review Candidates / candidate status	Do not approve; follow your team's communication process.	No, unless your team sends a separate message
Need an entity-specific view	Entity selector	Choose parent, all entities, or one specific entity.	No
Need to manage access	Members	Assign members to the right entity.	No
Need process help	Support	Review guidance or contact alphaSource.	No

WHEN TO CONTACT SUPPORT

SITUATION	WHAT TO DO
Entity import didn't go as expected	Contact Support before re-importing a large file.
Child entity was archived by mistake	Contact Support to restore it.
Automation criteria or rules look wrong	Contact Support — alphaSource can help update, pause, or remove the rule.
Member doesn't have the access you expect	Verify their entity assignment and role first, then contact Support if it's still not resolved.
Candidate screening or report issue	Contact Support with the company, role, candidate, approximate time, and a description of the issue.

NEVER

Never treat scores as a hiring decision. Never send a scheduling link before your team approves. Never use the wrong entity view when reviewing entity-specific activity.

Final launch check

READY TO LAUNCH
APPROVAL-CONTROLLED

FINAL READINESS CHECK

- Hiring managers know where to review candidate reports
- The team understands scores are review aids, not hiring decisions
- The Review Candidates approval workflow is understood
- The scheduling link is configured and correct
- Entities and members are assigned the way your team expects
- Everyone knows when and how to contact Support
- Candidate links are tested and pointing to the right roles
- Closed roles are inactive so they stop collecting candidates

FINAL STANDARD

"Each role has a clear link. Every candidate gets a consistent review. Scores are review aids — not hiring decisions."

alphaScreen helps hiring teams move faster while keeping candidate review consistent, organized, and approval-controlled.
